

Application List

Applications that PacketShaper® and iShaper™ Classify and Control

PacketShaper and iShaper deliver an accurate picture of network traffic, automatically discovering and establishing visibility into over 600 common applications, while providing the ability to define thousands more. Leveraging Layer 7 Plus application knowledge, as

well as traditional Layer 2-4 information, they monitor and classify traffic based on a variety of characteristics, including application signature, URL, HTTP content type, Oracle server, Citrix Published Application, IP address, VLAN, MAC, MPLS tag, DiffServ, TOS and more.

This application-layer visibility enables enterprises to quickly identify and diagnose network issues and ensure Quality of Service (QoS) for business-critical applications at every location.
